SKYNET PARTICIPATES IN GREAT AMERICAN TEACH-IN

Palm Harbor, FL: “Learn yourself, learn your talents, and allow life and your talents to guide you” was some of the advice Kyle Knudsen of Skynet Healthcare Technologies gave to 6th grade students at East Lake Middle School in Tarpon Springs, FL on November 15 as part of the 2017 Great American Teach In.

Knudsen demonstrated the Real Time Location System (RTLS) and emergency call wearables and system and talked about technology, 3-D printing, and technology changes to this group of students at an Engineering magnet school. “Can my mom use this to track me?” one of the students wanted to know, as the students are becoming more familiar with tracking apps on their phones and things like GPS. They were relieved to learn the technology is only currently available in senior living communities, and excited about possibly seeing Skynet where their grandparents may live.

Skynet is committed to supporting technology students of all ages as they will be the future designers, engineers, and programmers who may one day be Skynet employees.

About Skynet Healthcare Technologies, Inc.: Headquartered in Tampa Bay, FL, Skynet Healthcare Technologies delivers smart technology solutions to the senior living market. Skynet provides emergency call, real time location system (RTLS), and technology partnership to enhance resident safety and provide better analytics for communities.
