

# SENIOR SOFTWARE ENGINEER

## Overview

Skynet Healthcare Technologies has an exciting opportunity for a **Sr. Software Engineer** to join the Dev Team in our Palm Harbor, Florida location. The successful candidate will be responsible for the development, test, build, and support of high-quality software for Skynet products. A strong work ethic is critical along with experience in navigating matrixed organizations, and the skills to serve as a technical lead for small and large-scale projects when needed. Do you love Application Development and want to bring your skills to an extraordinary organization? If so, Skynet may be the company for you!

Skynet Healthcare Technologies was founded in 2013 with the motivation and dedication to bringing the best of technology to the senior living industry. An evaluation of existing life safety features revealed the need for a more robust offering that could integrate the key functions of emergency call, wander management, and other life safety systems, into an all-inclusive, easy to deploy, and easy to use platform. We set out to build a new system that combined emergency call with real time location system (RTLS) enhancements and community integrations, and now have our unique technology being used throughout the US and Canada.

## Responsibilities

- Actively and passionately participate as a member of Agile software development teams charged with the on-time, on-budget delivery of a project
- Develop software that meets customer requirements to include congruency with established technology baselines and roadmaps
- Conduct unit tests against all committed code
- Participate in all functional software and performance test activities
- Work under limited direction with extensive latitude for the use of initiative and independent judgment
- Participate in the exchange of ideas and information with the customer; ask questions that may reveal other problems that may be solved
- Organize verbal and written ideas clearly and use an appropriate business style
- Offer new ideas and suggestions for improvement. Identify and implement new practices and processes that are “best in field”
- Demonstrate a commitment to quality; anticipate, meet and exceed expectations by solving problems quickly and effectively; making customer issues a priority
- Ensure 100% adherence to all company and customer policies and procedures (i.e. Confidentiality, Health, Safety and Quality)
- Create and document all actions, practices, procedures and processes pertaining to the developed software
- Interpret a variety of instructions furnished in written, oral, diagram or schedule form

## Technical Skills Required

- Strong experience (5-8 years) developing software in C#, ASP.Net, Angular JS, SQL and MongoDB
- 3+ years experience in JavaScript, Swift, Sencha Touch and .NetCore
- Xamarin experience a huge plus
- Strong experience designing, developing, deploying, and maintaining cloud-based applications and services on Microsoft Azure
- 3+ years deploying applications on Windows Server, Windows 8.1/10, and Linux
- Experience with GIT, Visual Studio Online, and 1 other source code control system
- Strong experience in using Docker for the deployment of applications
- Strong experience working in Agile Teams and familiarity with Agile Project Management tools, such as Jira
- Design, build, document, and support REST/HTTP, SOAP APIs, including JSON data formats and API versioning strategy
- Experienced in developing applications that use relational and non-relational databases for persistent data stores
- Ability to interpret and modify data models
- RabbitMQ experience and Continuous Integration tools, such as Octopus are good to have, but not required

## Non-technical Qualifications

- Experience conducting discovery or collecting business requirements for an internal or external customer
- Experience working on multiple, simultaneous projects with varying milestones
- Experience supporting an application or service that is deployed in multiple geographical locations
- Extensive project team experience (4+ years)
- Ability to write, speak, and comprehend written and spoken English a must
- Ability to work independently and in a team with minimal supervision
- Experience contributing to departmental and project budgets
- Ability to work effectively under pressure
- US citizen or ability to gain a Green Card

Skynet is a family-oriented team environment with attention to core values we demonstrate daily. We make it fun to passionately pursue our vision of "technology in service to humanity" and it's important to us that we keep our employees healthy and happy in the process.
